

Maintenance Platforms and Stands

Description

KWD manufactures the C-130 ISO Maintenance Platform/Stand for the U.S. Air Force and Navy, in addition to foreign militaries worldwide. Further, KWD also manufactures a variety of other maintenance platforms/stands, including, but not limited to, those used to support F-15, F-16, F-22, F-35 and B-52.

The C-130 maintenance platform/stand consists of 16 manually adjusted work platforms used in combination to provide a continuous working surface around the aircraft. The units are constructed of welded aluminum tubing with anti-skid walking surfaces. The base unit is equipped with casters and jacks for mobility and height adjustment. Optional components can be added to the platforms that provide electrical outlets, quick-disconnect air, and lighting. The unit also provides stairs, over wing ladder, and allowances for customer tool boxes.
